

DESCRIPTION

The PuraGuard QC™ oil coalescing filter provides purified compressed air on any air braked vehicles. It consists of a spin-on cartridge, mounted to an aluminum body. The spin-on cartridge contains a drain valve for maintenance. For ease of serviceability, all maintenance kits do not require removal of the assembly from its mounting on the vehicle.

Vehicles operate best with clean dry compressed air. The PuraGuard QC™ oil coalescing filter will remove particles and oil down to 1 micron in size. It must follow the air dryer in the system and removes approximately 90% of oil aerosols and particulates.

The PuraGuard QC™ oil coalescing filter replaces the PuraGuard™ system filter.

For service information see SD-08-187B.

Weight 2.5 lbs.
Device Code 187
