**Subject:** **ABS Diagnostic Test Unit with PLC**

The Brake-Link™ provides convenient hand-held testing of Bendix ABS systems on trucks, buses, coaches and trailers. The hand-held unit derives power off the vehicle and enables fast access to configuration, fault codes, fault history or a series of tests through either push button or menu/cursor operation. The unit can communicate via J1939, J1587 or PLC (J2497) and comes with connectors and cables for connectivity to a J1708/J1587 diagnostic connector or the J560 trailer nose 7 pin connector. For a tractor/trailer equipped with Bendix PLC ABS one connection allows access and testing to both units.

The Brake-Link™ features capacity for upgrade to add functions such as RP-1210A and diagnostic capability for other ABS systems.
