When it's not a genuine Bendix, what you don't see, is what you get . . .

A "rebuilt" compressor is not the same as a remanufactured compressor, especially when it's a genuine Bendix. Why? Because unlike many reman models on the market today, genuine Bendix compressors are remanufactured with original OE components, up-to-date OE manufacturing processes, and tested to OE quality specifications to ensure absolute peak performance.

Here's just a sample of the substandard components and practices found on non-Genuine, rebuilt compressors bought right off the shelf.

PISTON	CONNECTING RODS	GASKET SURFACES	PISTON RING	SECURING HARDWARE
				
Poor quality replacement pieces	Poor bearing surfaces	Poor machining & scratches	Damaged salvaged piece	Lower grade bolts often used

Go with the best. Go with Bendix.
